

 **OPTO4EDGE**

SD-WAN for your hybrid workforce

Prioritize your Teams network with **OPTO4Edge**

Securing a future ready work place

OPTO4Edge is an SD WAN solution designed for the hybrid workforce where it delivers business grade secure connectivity wherever your employees are. The solution is managed through a simple single pane of glass that optimizes visibility and resides in Microsoft Azure.

Increase network availability for optimized application performance

Advanced resilience and security for remote workers

Protect any network from cyber threats with built-in security

Simplify network operations with automated cloud-based management

Reduce service provider and on-premise hardware costs

Cost effective OpEx model

What is **OPTO4Edge**?

This feature rich, fully managed software defined network connectivity service enhances enterprise network capability to improve critical Microsoft Teams collaboration performance, optimize end user experience and increase productivity with the ability to include secondary internet services such as LTE and broadband.

OPTO4Edge solution enables the enterprise to improve remote network quality and connectivity, while reducing the cost of internet services. The solution removes the need for expensive WAN cable installation, expensive network equipment and the support costs associated with such configuration and management.

SD-WAN provides an isolated private connection with built in internet security and centralized unified threat management. Encryption ensures privacy on untrusted WiFi and other public access networks, meaning disparate remote workforces can collaborate securely wherever they are with high security.

Benefits of **OPTO4Edge**

- '' **Delivered from Microsoft Azure locations and prioritize Teams voice**
- '' **Reduces security risk by preventing unauthorized access to specific network resources**
- '' **Extends centralized unified threat management to remote networks**
- '' **All in one solution**

Why choose **OPTO4Edge**?

Seamless integration

OPTO4Edge, with its simplified unified architecture, is designed to integrate seamlessly with your existing infrastructure, strengthening branch security and reducing the time required to manage the network.

Complete visibility and management

SCB Global's OPTO4Edge uses software-ended architecture to provide complete visibility and simplified management of your entire WAN alongside other applications through a single pane of glass.

- “ Uses public internet to create an economical, isolated and secure private connection with increased resilience
- “ Remote access to internal services increases mobile workforce productivity
- “ Reduces security risk by preventing unauthorized access to specific network resources
- “ Encryption ensures privacy on untrusted WiFi and other public access networks
- “ Extends centralized unified threat management to remote networks
- “ Enables split tunnelling of client traffic for corporate applications vs. general internet
- “ Supported on remote device types: Android, iOS, Linux, macOS, and Windows
- “ Full featured & cost-effective VPN solution
